

Oak90 Modular Stair Kit :: External Railing Guide

External Railing Kits:

We can supply external Railing kits if needed to protect the second side of the stair when it is set away from the wall. This kit consists of 5 balusters, handrail and fixings and will add a further 50mm on to the stair width.

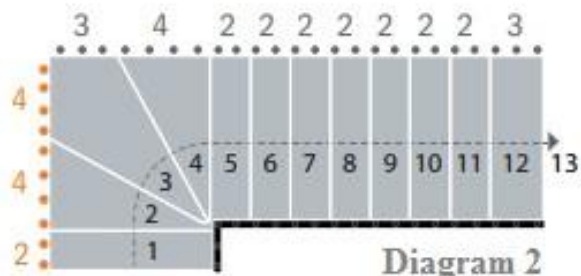

Oak 90 - 700 wide option:

In Diagram 1 (featured below) it shows a typical layout for the Oak 90 stair (700 wide option). The balusters are represented by the numbers and dots. To calculate the number of Railing Kits required to cover the left-hand side of the stair, add up the quantity of the balusters shown: $3 + 4 + 2 = 9$, and therefore 2 Railing Kits (5 balusters per kit) will be required for this design.

Oak 90 - 800 wide option:

In Diagram 2 (featured below) it shows a typical layout for the Oak 90 stair (800 wide option). The quantity of the balusters: $4 + 4 + 2 = 10$ and therefore 2 Railing Kits (5 balusters per kit) will be required for this design.

Oak 90 - 900 wide option:

In Diagram 3 (featured below) it shows a typical layout for the Oak 90 stair (900 wide option). The quantity of the balusters: $4 + 5 + 2 = 11$ and therefore 3 Railing Kits (5 balusters per kit) will be required for this design.
